

HUNTSMAN®

Data Protector

Who, what, where and when

According to Gartner (Magic Quadrant for SIEM 2008), 'an optimal (SIEM) solution will support real-time collection and analysis of log data from host systems, security devices and network devices; will support long term storage and reporting; will not require extensive customisation; and will be easy to support and maintain.' Huntsman®'s DATA PROTECTOR does this and more.

DATA PROTECTOR

- Helps to build the complete picture of 'who, what, where and when' quickly - when an event of interest has occurred;
- Detects non-compliant activity in real time - so a rapid response can limit impact on security; and
- Monitors various ICT elements - from individual assets to network performance and utilisation.

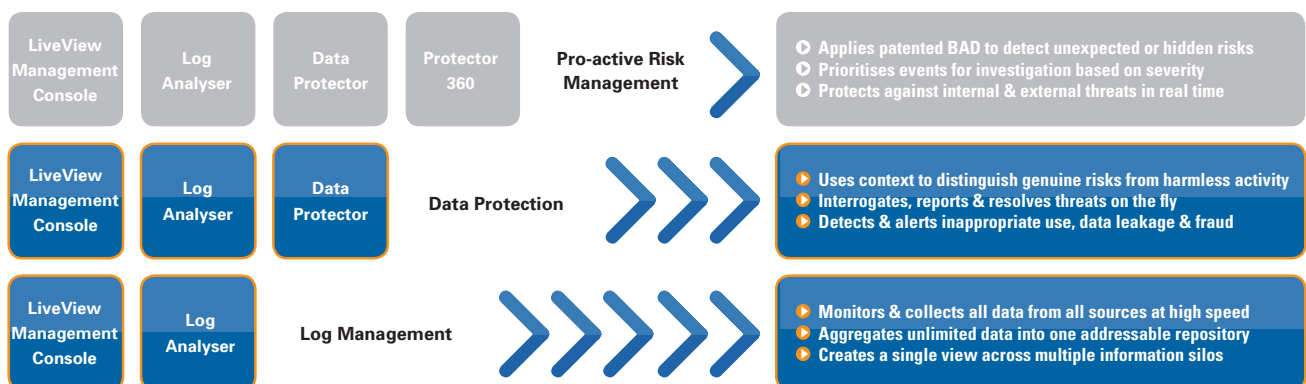

Flexible not just modular

The volume of network- and security-related events requires IT staff to deal with multiple concurrent alerts from different devices. To interpret these events accurately, DATA PROTECTOR builds on the outstanding data capture and analysis capabilities of LOG ANALYSER, adding a multi-stage correlation engine. This gives IT security staff the vital context needed to connect the dots between apparently unrelated events, regardless of volume and complexity of the data.

"Knowing our threat posture, as it happens, means that my team can get on the front foot and protect the business from data loss in real-time, before it happens."

Security Manager, Global Telecommunications Provider

Huntsman® Intelligent Security Suite

Intelligent Security. We invented it.

HUNTSMAN®

Data Protector

Data Protector sees threats others can't see

How many disasters could be averted if you could ensure that policies are adhered to and breaches are discovered, in real time?

Huntsman® DATA PROTECTOR

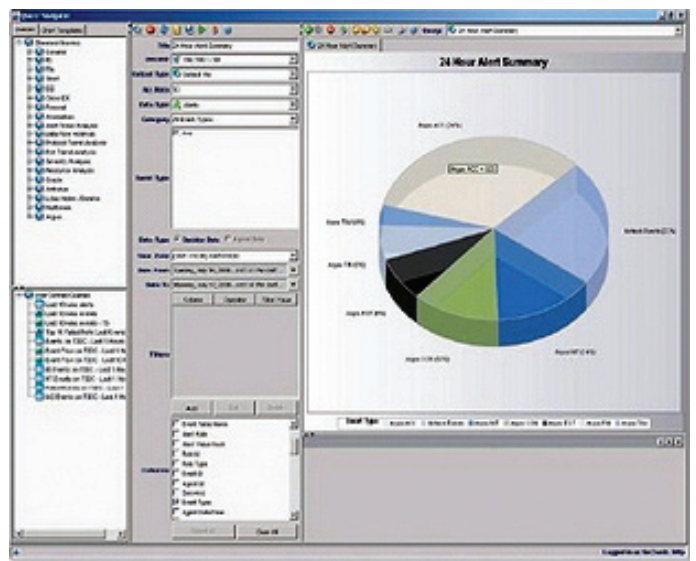

- Flags any activities that breach business policy or present a known business risk;
- Identifies activities that indicate misuse, inappropriate access, data leakage or fraud;
- Presents information for prompt interpretation and automated corrective action (if needed);
- Prioritises threats so security staff can focus on areas of greatest risk; and
- Presents a dynamic real-time view of all connections and activities across the network.

Integrated not just added

IT staff must make sense of a mosaic of often contradictory events and alerts. Huntsman®'s correlation engine simplifies the task by presenting all information about interlinked yet apparently unrelated events, via a single console. Hence, less time is needed to perform root cause analysis, so the window of risk to the enterprise is minimised.

Alerts can be presented in a range of formats and be configured to match the responsibilities of any individual user. Huntsman® also has a response and incident management capability which completes the risk management lifecycle process.

DATA PROTECTOR is part of the integrated Huntsman solution and can be expanded or upgraded to PROTECTOR 360 at any time, without major investment, redundancy or disruption of your organisation.

Commitment not just experience

Tier-3 is a market leader in Security and Compliance Management, offering a range of solutions based on innovative and patented technologies. As a specialist, Tier-3 brings an unrivalled depth of experience that is prized by our customers.

Huntsman®'s flexible adoption model lets you add functional modules as you need them. Since the platform is easily adapted to meet new business or regulatory demands, Huntsman® ensures that you are equipped to meet the ongoing challenge of compliance management now and well into the future.
