HUNTSMAN®

Huntsman® Overview

For organisations whose security is business-critical, Huntsman® delivers Intelligent Security in a holistic, fully-integrated risk management platform.

Moving beyond silo-centric point and bundled solutions, Huntsman® has the intelligence to provide whole network visibility from a single console, so you can join the dots between apparently unrelated events and respond to threats that other systems miss. Huntsman® is also easy to use, economical to expand

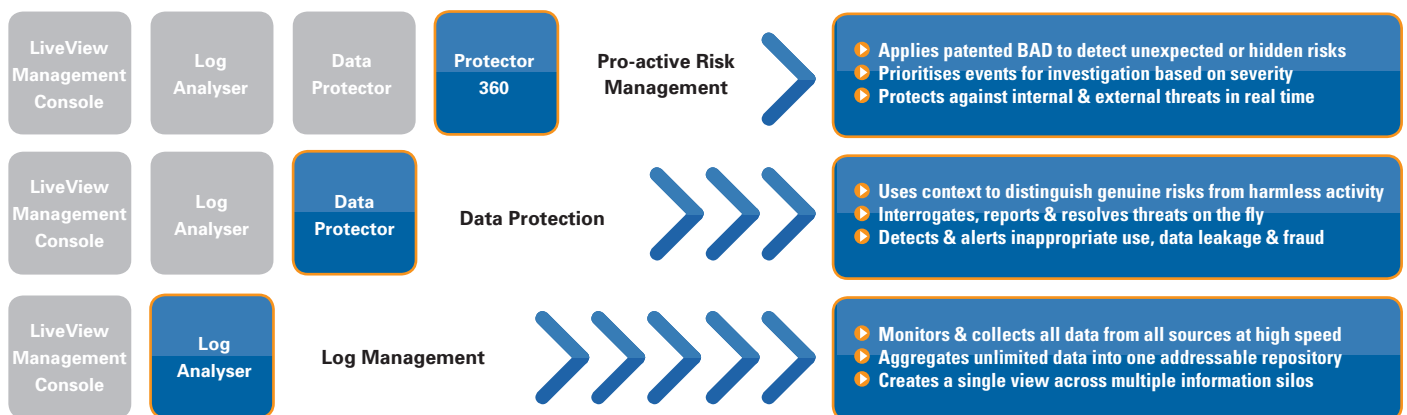

and its unique design allows additional modules to be added within a single architectural framework.

Huntsman® gained its security and compliance management credentials in the most demanding environments; it can detect insider data leakage, external fraudsters, e-mail loaded Trojans and the highly sophisticated blended threats from organised attackers. For this reason, many of customers in Australia, Europe and Japan are in defence, intelligence, government, police, banking and finance.

Flexible not just modular

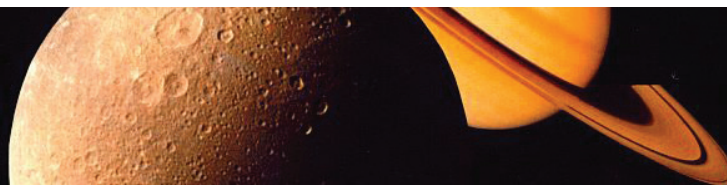

Huntsman® is truly flexible with 3 modules - Log Analyser, Data Protector and Protector 360 - which can stand alone or build sequentially to suit your organisation's needs. With Huntsman®'s capability spanning data collection and audit through to pro-active ICT asset protection using Behavioural Analysis, you won't face the prospect of discarding solutions or writing off investments, even when policy or regulatory requirements change.

Huntsman® Intelligent Security Suite

Intelligent Security. We invented it.

“With all our ICT activities now monitored from a central point, we have a single data repository and, rather than constantly fighting fires, we can prioritise our remediation efforts based on their potential impact on the business as a whole.” **Compliance Manager - Global Financial Institution**

Huntsman® protects from threats others can't see

To match the complex security and compliance environment in modern organisations, today's management systems need to be smart. They need to analyse massive volumes of data to find the events that pose risks, and provide reports and forensic playbacks to ensure response to non-compliant activity. Moreover, they must do this in real time, not hours or days later. Anything less exposes an organisation to genuine risk.

While it is easy to find products to do part of the job, governance requires a holistic solution smart enough to connect the dots between seemingly unrelated events. Huntsman® was created by Tier-3, who holds the patent for Behavioural Anomaly Detection, to protect against the increasingly complex threats that organisations face from within and without.

Huntsman® is truly intelligent: unlike other solutions, it learns, adapts and grows.

Behavioural Anomaly Detection means stronger security and operational risk management.

Huntsman® establishes a baseline of normal system and user behaviour, and uses dynamic, predictive techniques to detect deviations from the norm. By continuously learning and baselining the behaviour of your people, processes and systems, Huntsman® detects and prioritises the changes that are risky, providing early warning of potential data leakage, malware or fraud.

Integrated not just added

The adoption of stand-alone solutions to meet individual requirement has obvious appeal. However, when you try to integrate a mosaic of products to achieve operational efficiency or a total management solution, the limitations of point solutions emerge. Implementation and operational overheads spiral as the shortcomings of rigid design and closed feature sets start to limit your options.

Our architects applied advanced engineering principles when designing Huntsman® so it could adapt to future business needs without constant re-work. In the same vein, Huntsman was designed as a flexible platform with easy integration, configuration and adaptation as part of its DNA.

Huntsman®'s LiveView console provides a single, holistic view of your entire network and business systems. On demand dashboard- or browser-based visualisations of activities across the enterprise, permit IT operations and business users to stay on top of security and compliance matters, at a glance.

Commitment not just experience

Conceived, designed and developed by Tier-3's own mathematicians, scientists and security experts, Huntsman® is the result of our 10 year commitment to create a strategic set of security and compliance management solutions. From the vital building block of LOG ANALYSER which addresses log audit, security and compliance management needs, to the all-encompassing PROTECTOR 360 which autonomously manages unexpected, unknown risks, each Huntsman® module has been designed to stand alone or integrate into a complete solution.

This is why organisations with the most demanding security situations and standards choose and continue to recommend Huntsman®. Although many prefer not to be named in public, they are available to discuss their choice of Huntsman® one-on-one.
