

HUNTSMAN[®]

Solutions Overview

HUNTSMAN®

The challenge for the competitive internet-connected business is to ensure access for internal and external users for legitimate purposes and yet prevent misuse, without compromising efficient business operations.

Challenge of connectivity

The modern business needs to be attuned and connected to its markets, customers, suppliers, advisers and partners. Yet, with ever-increasing internet connectivity, file-sharing and use of mobile devices, the risk to your business expands to include malicious external attacks, internal data leakage and costly compliance breaches.

The challenge for the competitive internet-connected business is to ensure access for internal and external users for legitimate purposes and yet prevent misuse, without compromising efficient business operations.

Illusion of integration

Point solutions with their individual management consoles can't provide end-to-end network monitoring, central control or full network visibility; nor can they provide clarity of process, policy or performance for compliance. Their silos of information create highly effective barriers to usable intelligence so that, in the event of a security breach, it can take hours or days to find the root cause, and longer to implement changes.

Responding to demand for integrated solutions, many security vendors have filled the gaps in their platforms with acquired point solutions. This achieves integration in theory but not in practice, leaving users struggling to make the pieces fit and work together. For most organisations, seamless integration remains an illusion.

With the traditional security perimeter being constantly eroded, the challenge for business is even greater. For this reason, analysts like ESG say that organisations need 'tight identity/information security integration, constant user and network monitoring, and strong technologies for policy enforcement¹', not just a mosaic of disparate solutions.

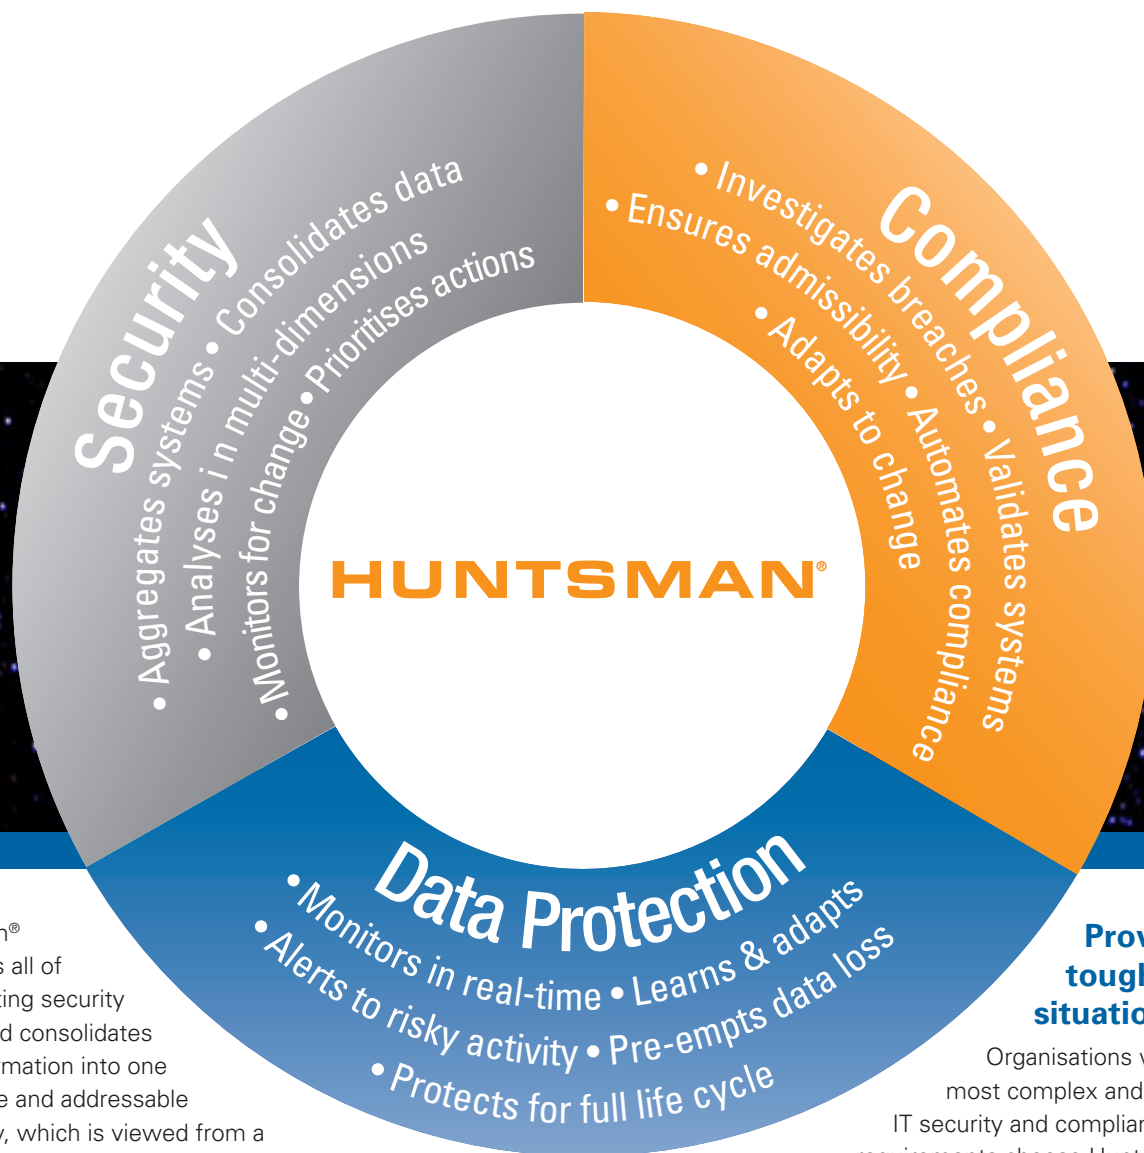

Integrated and intelligent

Tier-3 designed Huntsman® from the ground up as holistic, integrated, centralised platform that protects in the 3 core sectors of enterprise risk management:

- IT Security
- Data Protection
- Compliance.

1. Enterprise System Group White Paper: Identity and Information Security Integration, September 2009.

Intelligent Security. We invented it.

Huntsman® integrates all of your existing security assets and consolidates their information into one accessible and addressable repository, which is viewed from a single LiveView console. In this way, the location and root cause of access to sensitive information or of a security or compliance breach can be pinpointed in real time, and remedial action taken immediately, not hours or days later.

Using its patented Behavioural Anomaly Detection, Huntsman® monitors the whole network and establishes a baseline of normal use. Huntsman® then constantly searches for activity outside the norm, conducting multi-dimensional analyses to determine the risk to the business, and alerting IT staff in real time when action is required. Huntsman® ensures that your IT and compliance staff can focus on the genuine threats to your organisation, and gives them the insight to connect the dots between events that may appear unrelated, innocuous or both.

Cost-effective and scalable

Huntsman® integrates all your security systems, applications, gateways, servers and databases. Apart from ensuring whole network visibility, enabling rapid analysis, establishing root cause and enabling rapid response in real time, Huntsman® ensures that your existing security assets yield more usable information, generating even better value and return to the business.

Huntsman® is also modular and scalable, so your future security investment can be built on your initial investment sequentially and without discard, providing a flexible, predicable and cost-effective security roadmap.

Proven in the toughest situations

Organisations with the most complex and demanding IT security and compliance requirements choose Huntsman®, including law enforcement, intelligence, border protection, banking and finance in the UK, Japan and Australia. With offices in these countries and partners elsewhere, Tier-3 is well placed to support local and global enterprises.

Due to the sensitivity of their work, many Tier-3 customers do not wish to be identified, yet they are willing to discuss their choice and continued use of Huntsman®, individually.
